Welcome to Servitech International, a new name in maintenance for the water and process industries, yet a company with a long history and established reputation for high quality service.

A circular inset image showing a close-up of a white electronic component on a printed circuit board.

Formerly the UK Service Division of GLI International, and previously pHOX Systems, Servitech was formed in early 2000 to facilitate a management buy-out, with all existing personnel retained. Thanks to its forebears, Servitech is continuing over 20 years' experience in providing first class repair and maintenance services. It is this valuable heritage, knowledge and experience which we are now taking forward, under the Servitech banner, as an independent third party service provider, to provide an improved, better value service to our customers.

Servitech International provides a complete suite of support services for owners of analytical instrumentation, specialising in the maintenance of water quality monitoring, open channel flow monitoring and auto sampling machinery. With our team of highly experienced field service engineers, we are able to offer a comprehensive package of maintenance, tailored specifically to meet your individual requirements, at competitive rates. Our range of services includes nationwide on-site all-hours maintenance, workshop repairs, spare parts and chemical supplies, making us a one-stop shop for meeting the maintenance needs of the water and process industries. We are the approved maintenance provider for GLI International, pHOX Systems and Warren Jones products. So if you have maintenance requirements, but do not have the resources to cope, or if you require a cost effective alternative to using your valuable personnel, please contact us and we will be happy to provide a quotation for services that will not only meet but exceed your service requirements.
